

Physics-informed neural networks (PINNs)

A novel approach for forward
and inverse modelling

Neural Networks quéésako?

Artificial Neural Networks (ANNs)

1. A computational model inspired by the structure and function of the human brain, e.g., the perceptron – *Historically*
2. A function mapping the input(s) vector(s) \mathbf{x} to predicted output(s) vector(s) $\hat{\mathbf{y}}$ – *Mathematically*

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta}) \quad \text{with } \boldsymbol{\theta} \text{ being weights } \mathbf{w} \text{ and bias } \mathbf{b}$$

Deep Learning

1. Learning multiple levels of composition, *i.e.*, constructing complex patterns or functions by combining simpler ones
 - e.g., Deep Neural Networks (DNNs)

Neural Networks quéésako?

NNS ~ function mapping the input(s) vector(s) \mathbf{x} to predicted output(s) vector(s) $\hat{\mathbf{y}}$

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta})$$

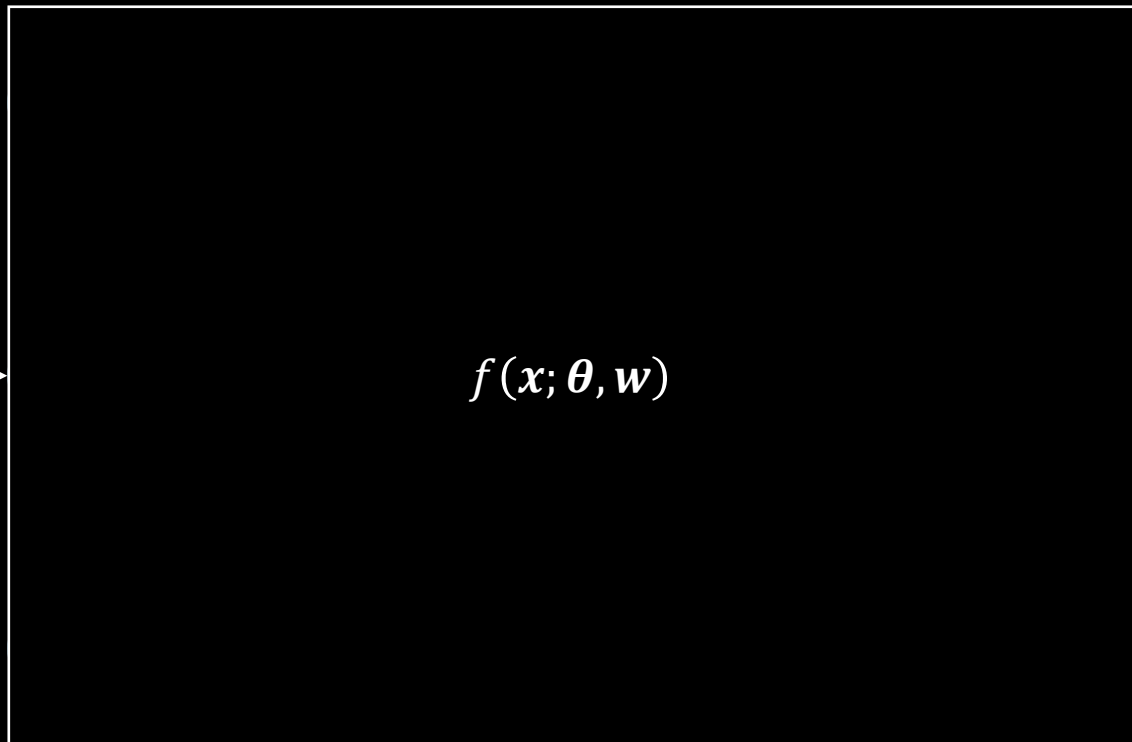

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta}, \mathbf{w}) = \boldsymbol{\phi}(\mathbf{x}; \boldsymbol{\theta})^T \mathbf{w}$$

; $\hat{\mathbf{y}}$ is a linear combination of the input features

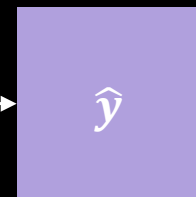

; $\hat{\mathbf{y}}$ is a non-linear combination, with $\boldsymbol{\phi}$ a nonlinear transformation, and \mathbf{w} being mapping parameters (weights \mathbf{W} and biases \mathbf{b})

Input layer

Output layer

$f(x; \theta, w)$

Prediction

Neural Networks quéésako?

NNS ~ function mapping the input(s) vector(s) \mathbf{x} to predicted output(s) vector(s) $\hat{\mathbf{y}}$

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta})$$

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta}, \mathbf{w}) = \boldsymbol{\phi}(\mathbf{x}; \boldsymbol{\theta})^T \mathbf{w}$$

; $\hat{\mathbf{y}}$ is a linear combination of the input features

; $\hat{\mathbf{y}}$ is a non-linear combination, with $\boldsymbol{\phi}$ a nonlinear transformation, and \mathbf{w} being mapping parameters (weights \mathbf{W} and biases \mathbf{b})

Layers

\mathbf{x}

$$\mathbf{a}^l = \boldsymbol{\phi}(\mathbf{z}^l) = \boldsymbol{\phi}(\mathbf{W}^l \mathbf{a}^{l-1} + \mathbf{b}^l)$$

$\hat{\mathbf{y}}$

; Input layer

; Hidden layers $l = 1 \dots L - 1$

; Output layer L

Forward

Neural Networks quéésako?

NNS ~ function mapping the input(s) vector(s) \mathbf{x} to predicted output(s) vector(s) $\hat{\mathbf{y}}$

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta})$$

$$\hat{\mathbf{y}} = f(\mathbf{x}; \boldsymbol{\theta}, \mathbf{w}) = \boldsymbol{\phi}(\mathbf{x}; \boldsymbol{\theta})^T \mathbf{w}$$

; $\hat{\mathbf{y}}$ is a linear combination of the input features

; $\hat{\mathbf{y}}$ is a non-linear combination, with $\boldsymbol{\phi}$ a nonlinear transformation, and \mathbf{w} being mapping parameters (weights \mathbf{W} and biases \mathbf{b}) to the final output

Forward propagation

\mathbf{x}

$$\mathbf{a}^l = \boldsymbol{\phi}(\mathbf{z}^l) = \boldsymbol{\phi}(\mathbf{W}^l \mathbf{a}^{l-1} + \mathbf{b}^l)$$

$\hat{\mathbf{y}}$

; Input layer

; Hidden layers $l = 1 \dots L - 1$

; Output layer L

Forward
Back
Propagation

Backpropagation

Update \mathbf{w} to minimize a loss function $\mathcal{L}(\hat{\mathbf{y}}, \mathbf{y})$ (e.g., MSE, MAE, etc.)

1. At the output layer $\delta^L = \frac{\partial \mathcal{L}}{\partial \mathbf{a}^L} \cdot \mathbf{a}^L$

2. For Hidden layers $\delta^l = \mathbf{W}^{(l+1)T} \delta^{(l+1)} \cdot \mathbf{a}^l$

3. Weight update: $\mathbf{W}^l := \mathbf{W}^l - \eta \frac{\partial \mathcal{L}}{\partial \mathbf{W}^l}$

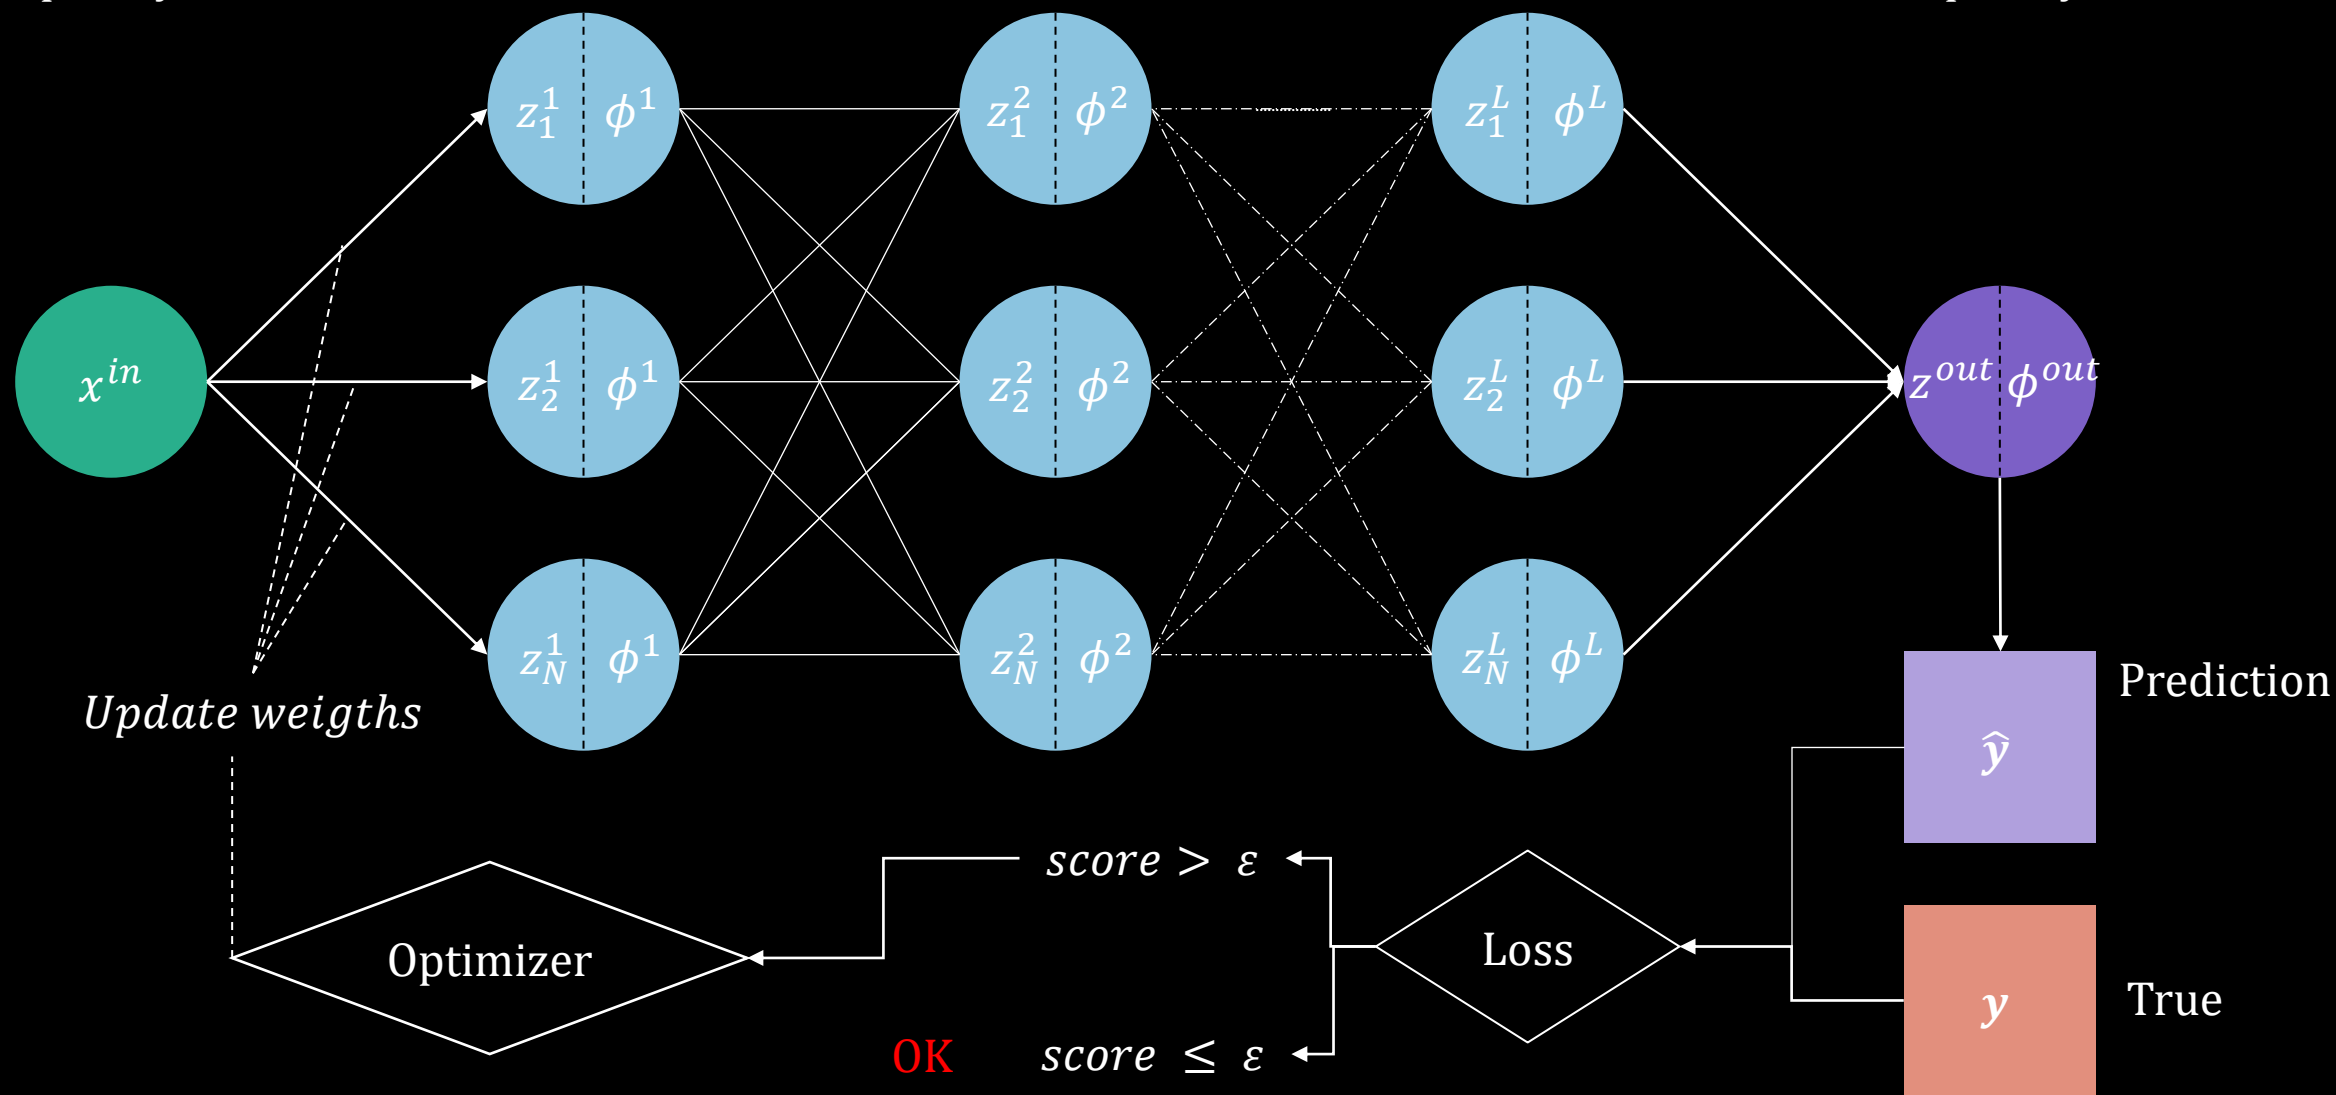

4. Bias update: $\mathbf{b}^l := \mathbf{b}^l - \eta \frac{\partial \mathcal{L}}{\partial \mathbf{b}^l}$

Forward Propagation

Input layer

Hidden layers L

Backward Propagation

Physics Informed Neural Networks?

PINNs ~ class of NNs that incorporate physical laws directly in the loss function to guide the learning process

- Most used case: PDE, ODE solutions
- Some applications:
 - Fluid dynamics: NS fluid flow simulations, Heat fluxes, soil hydrodynamics, ...
 - Solid mechanic: material stress and strains, ...
 - Quantum mechanic: approx. Shrödinger's equation, ...
 - Electromagnetics: solving Maxwell's equation, ...

Advantages

1. Integration of physics law (constraints)
2. Requires less data (+incomplete datasets)
3. Generalization (interpolation, extrapolation)

Disadvantages

1. Computer intensive (GPU)
2. Requires knowledge of physics
3. Hyperparameter sensitivity

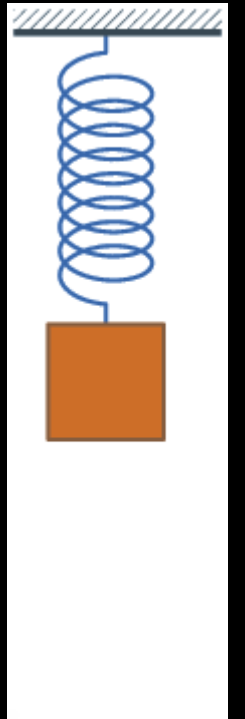

Physics Informed Neural Networks?

PINNs ~ class of NNs that incorporate physical laws directly in the loss function to guide the learning process

But let's try to build a PINN to solve the harmonic oscillator case
